ECO LIFESTYLE HOMES

VOLUME 1, ISSUE 1

APRIL 17, 2009

CREATE THE ECO LIFESTYLE WAVE

What a year 2008 was! We saw the power of the media and the Internet at work together like never before! Internet bloggers with massive television exposure created a wave of excitement that elected an obscure first term Senator President of the United States!

Now is the time for all of us to build another tremendous wave powerful enough to change the world! We need an ECO LIFESTYLE WAVE to sweep the world!

YOU MAKE A DIFFERENCE. We need YOU and everyone to be a part of the ECO LIFESTYLE WAVE to make every old energy wasting building an ECO LifeStyle home or place of business. At ECO LifeStyle Homes we've

joined forces with what we believe IS the best in green building materials in creating our truly green building system and more importantly our ECO IMPROVE

Beautiful older homes like new with ECO IMPROVE™ Energy Saving Rehabbing

rehabbing retrofit systems.

Of course we understand that the WAVE to an ECO LIFESTYLE is bigger than our little Company, but for eight years we

have been like many of you, a lone ranger in our efforts to build the right way creating energy saving, safer, happier, healthier homes. Unfortunately, politicians, companies and individuals have often only given lip service to the cause, not taken action.

NOW is the time for the ECO LIFESTYLE WAVE. Step up and as The Bible says "BE DOERS OF THE WORD" and GOOD STEWARDS as in the Native American tradition.

Unlike those who just talk, **YOU BELIEVE IN DOING THE RIGHT THING.** Now you can do it. **YOU CAN** create a wave of future progress and hope! **SHARE THIS NEWSLETTER. TOGETHER, WE ARE THE WAVE OF THE FUTURE!**

WELCOME ECO LIFESTYLE HOMES OF NIGERIA

We welcome our new ECO LifeStyle Homes Country partner **MODOCEPT NIGERIA LIMITED** they are as committed as we are to a clean green ECO LifeStyle for all.

With many Nigerians suffering from a poor electricity supply, it

is our dream to help ECO LifeStyle Homes of Nigeria create the WAVE of SOLAR and wind energy solutions for total off the grid communities.

Be global and join the ECO NIGERIA WAVE! Contact our ECO Lifestyle Nigeria partner at

LIFESTYLE
WAVE!**

ECO DESIGN BY MARY KOZLOWSKI

Environmentally friendly, sustainable, ecological: all phrases that are on the news, discovery channel and in newspapers and magazines almost every day. They make headlines when there is breaking news like a spike in oil prices, economic trouble or a new report on global warming; unfortunately, when the crisis passes, it is back to business as usual.

This approach has to stop. Sustainability and environmentally friendly design and development have to become the

standards not the exceptions.

Mary Kozlowski Architect, Inc. has been creating sustainable designs that are in harmony with the environment since 1989. Creating these projects is our specialty. We use this approach whether the project is on the seashore, in the mountains, forest, desert, prairie or the middle of an urban setting. It is at the core of every design we create.

We have had people tell us they would like to have an environmentally friendly pro-

ject, but they feared it would cost much more. As we have explained to them, this is not true. Looking purely at the economics of a project, going green is the only way to go.

It is a proven fact that well designed homes and buildings that are sustainable and use green construction materials and methods appraise higher, are less expensive to operate and have much higher resale value. A well designed green home puts money in your pocket from... **ECO DESIGN p. 3**

PUT SOME GREEN IN YOUR POCKET!

Timing is everything in business! NOW is the time to enter into an ECO IMPROVE retrofit business venture. Whether you are in sales or construction, ECO LifeStyle Homes is ready to help you CATCH THE ECO WAVE!

Money is a great sales tool! The new government economic stimulus package offers tax credits and grants available

to ensure energy efficiency in government buildings, military bases, low income housing and individual homes and businesses.

The home improvement and retrofit business is full of small local CONTRACTORS who need to move into Green Rehab and Home Improvement. ECO offers the products, sales and training needed to succeed

in the Green Build revolution.

The ECO SALES REP program is for everyone who shares the Green Dream of making our world a better place to live. The great part is, as with all new technologies or product needs, it takes people to educate and sell the benefits to the client. For this income potential, visit ecolifestyle-homes.net/sales_app.html

GREEN JOBS TO REBUILD AMERICA

As we all take the steps to become a green clean energy efficient world, we are creating new badly needed Green Jobs for your community.

Rebuilding America is something we're all responsible for. Rebuilding America means rebuilding our country and our economy. When you rehab or build your next project are you truly putting Americans to work

or the Chinese?

With ECO LifeStyle Homes systems you are buying AMERICAN! American Steel, 60% plus is recycled! Our siding and coatings are made in Kansas, widows in Wisconsin, our wall boards, interior and exterior are Georgia Pacific locally

made.

So when you buy and sell ECO LifeStyle Homes building and home improvement systems you really are helping to rebuild America and that's when ECO MEANS ECONOMY!

GO GREEN! GO AMERICA!

EASY LIVING™ BY ECO LIFESTYLE HOMES

With the necessary and pending strict new laws prohibiting mortgage lenders from predatory and sub prime lending practices, our ECO designers and development planners are focusing on creating the newest in Green Multi Family Residential.

These EASY LIVING™ Communities will comfortably fill the void left in the attainable and affordable housing markets. Not only will these new residences be attainable, they will contain the quality construction and energy saving features

INTRODUCING The New EASY LIVING™ Multi Family ECO LifeStyle Homes Communities

that are the sustainable living trademark of ECO LifeStyle Homes.

Attention to design functionality and details such as the use of sound

insulation horizontally and vertically between units make this an attractive alternative to renting.

We offer the same high tech eco options that are available on all of our residential products. Plus, the new EASY LIVING™ line also has reduced entry level price points for final sale to the public as low as \$99,000* for a 3 bedroom/ 2 bath unit of approximately 1,000 Square feet.

* Based upon average national costs. Final cost may vary depending upon actual costs for land and development.

ECO Focus On:

LED bulbs, A more directed light means less wasted light.

ECO Sense:

Mom and Dad were right!

Remember to "Turn off the lights when you leave the room!"

ECO IMPROVE ENERGY SAVING TIP #1

Sure, you've heard about energy-saving appliances and you've seen the new florescent light bulbs (CFLs). But you're still not sure if the whole energy-saving effort will actually pay you back. If that sounds like you, you're in the right place.

First and easiest saving tip: Switch your incandescent light bulbs for the new florescent bulbs. They're affordable, just as bright and they'll

save you a lot of money. Consider: the average U.S. household has 45 light bulbs - replacing that number of 75-watt incandescent bulbs with CFLs will save you \$180 per year.

For those concerned about the high mercury content in CFLs and its potentially deleterious long term environmental impact, or for those allergic to fluorescent lighting, LED might be your choice in lighting.

LED light bulbs give off directional light. In other words, the light goes where you aim it; therefore there is less wasted light. LED bulbs are also closer to the color of daylight, which new studies suggest is beneficial for staying alert.

Above all else when you leave a room, remember your Mom and Dad's advice and TURN OFF THE LIGHTS!

Passive solar design and bright airy open spaces characterize the unique BreeZe™ line by Mary Kozlowski Architect, Inc., exclusive award winning Architects, Planners and Designers for ECO LifeStyle Homes

day one because you are paying much less for heating, cooling and water. These are important

points anytime and especially in the current economic climate. Going green design is like your own personal stimulus check. As our friend and partner Ricky J. Sullivan has

said, "both ecological and economic start with ECO". In this economy and from now on, ecological and economics are going to be intertwined and that is where the growth is going to be located.

Beyond economics health, vitality and happiness are very important issues for most people these days. Numerous studies show well designed green homes and buildings

are healthier environments in which to live and work. People in these environments are happier and more productive.

ECO LifeStyle Homes is perfectly positioned to lead the way forward in this field. ECO LifeStyle Homes and Mary Kozlowski Architect, Inc. are shaping the crest of a wave that will sweep over the development world. Join us and live your dream!
